* For battlecruiser access I used the double capital ship facility building:
one on MS for opening the research, second on shipyard for building the BC;

**For all research times I used the proposition, that player has two building sites:
the MS& the carrier; so, when there was ability to build two things simultaneously,
I used the «longest» time instead of summing;

***So, from this is very easily seen that hiigarians make everything out of modules,
but the Vaygrs — halfly from modules, halfly from researches;
the problem is that u can research only one thing at a time;
but to build several modules on several ships;
